Tatebanko Gollum

This packet includes instructions and the six sides to make your own empty tatebanko box. And the pieces to make the insert for the Tatebanko lord of the rings Gollum scene.

You can make the box then insert all the various pieces that make up the scene.

Your best course of action would be to attach the six scene pieces to the base then build the box around it!

Printing this booklet:

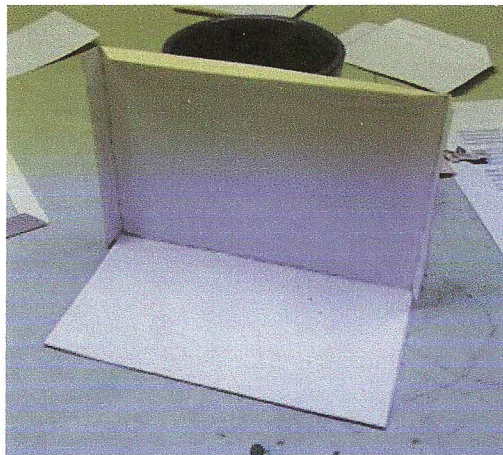

If you have printed this booklet on regular paper you can cut out the various pieces and glue or gluestick them to thicker paper. Card stock is best, index stock works well. And even cereal box cardboard is pretty good. You can even use a manila file folder. Anything that is like paper but thicker and stronger would work.

This is if you want to put your own diorama scene inside. The general process for making a tatebanko diorama is to apply most of the various scene pieces to the base then add the back, the two sides, the front, then finally the top.

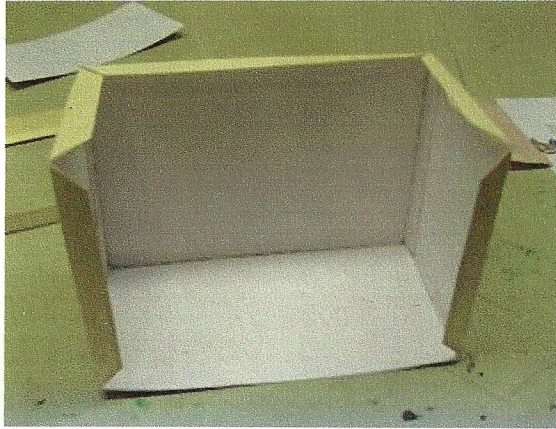

Instructions for Assembly of the box

Now you would build your diorama on the empty base. Glue most of your created pieces to this before you assemble the whole box. The six pieces of the Gollum scene are not shown in this guide. You just glue or glue stick them down to the base. The base has numbers on it so you know which piece goes where.

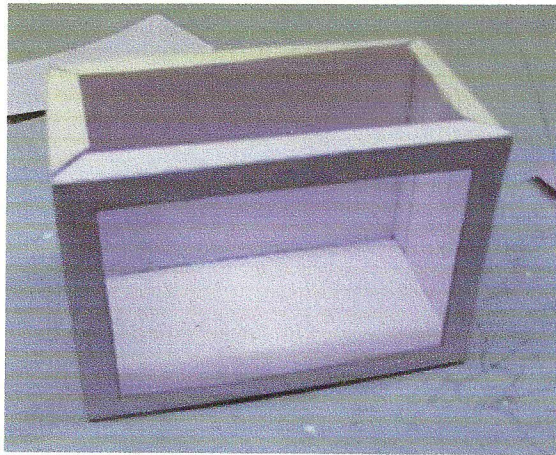

Once you have your pieces glued to the base you can build the box around it by starting with the back.

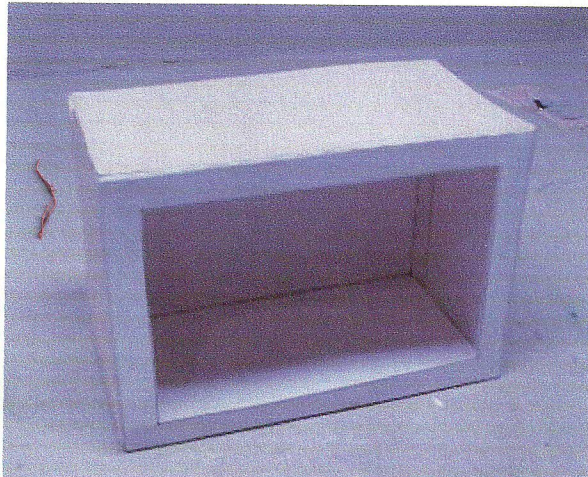

Now Glue the sides into place. Note how the tabs are in the front.

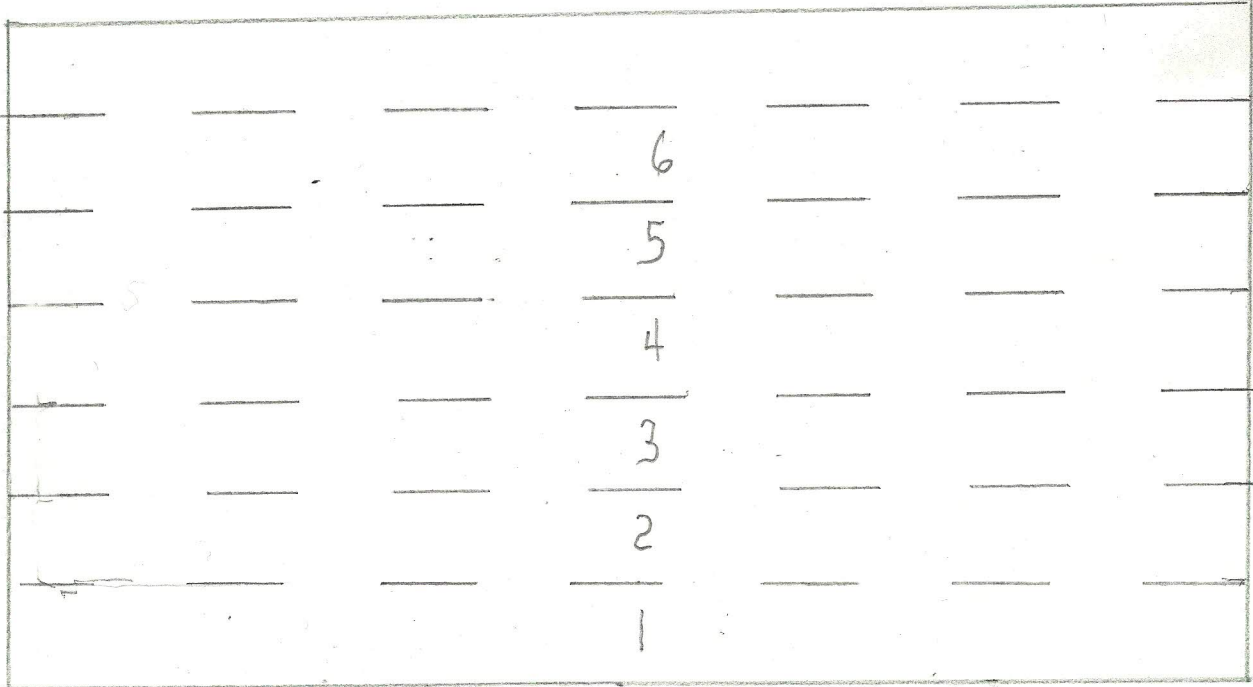

Glue the front piece into place.

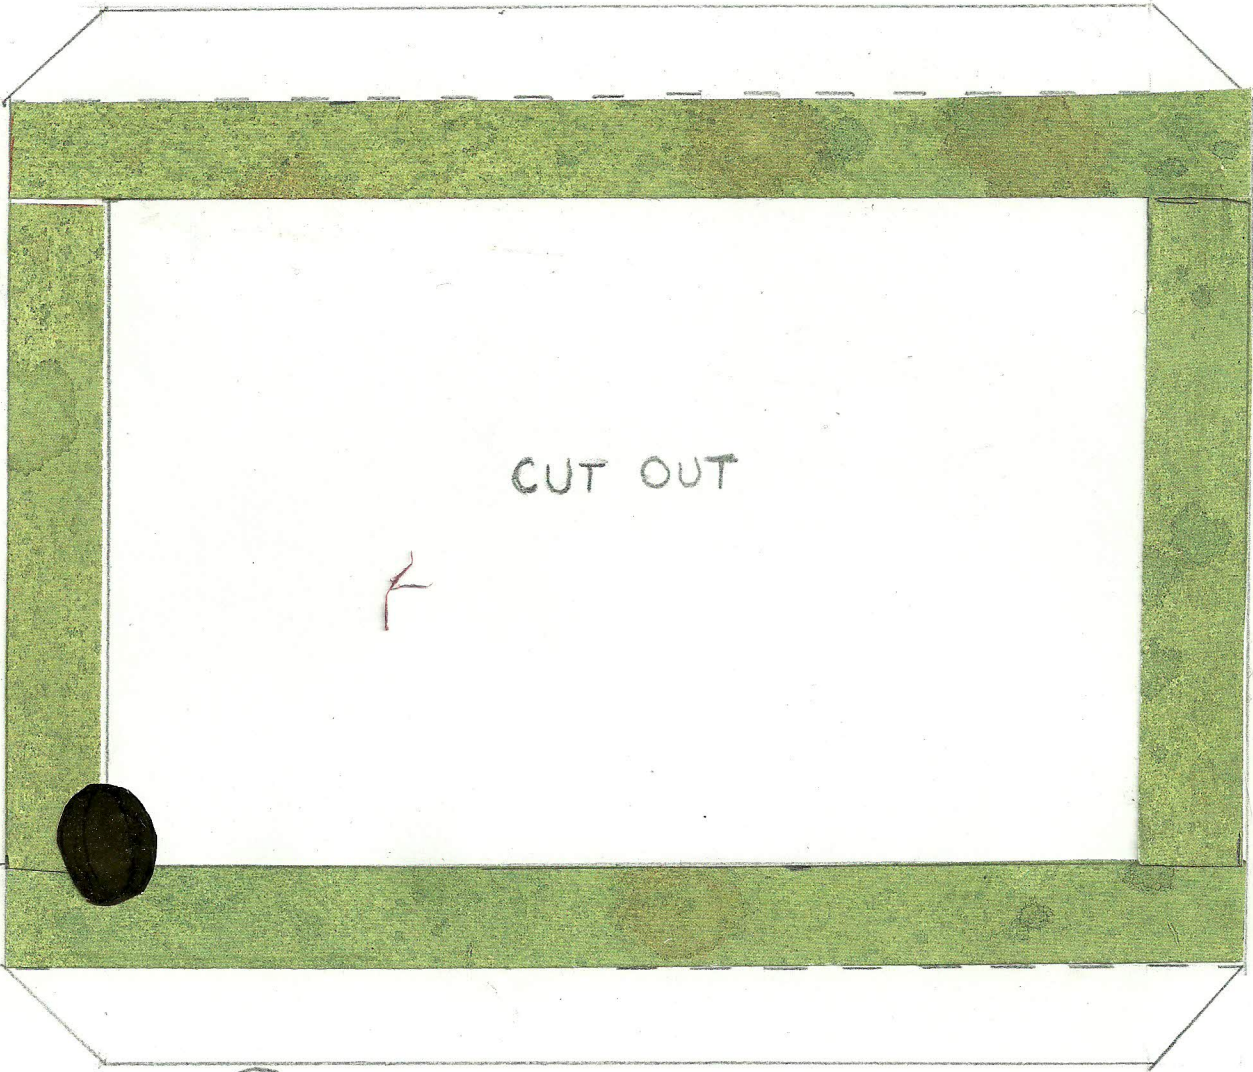

Finally, glue the top into place and you are done!
