ESSAYS FOR UNITED STATES POSTAGE STAMPS

No list of essays for United States postage stamps has been published since that written by Mr. John K. Tiffany and published in the American Journal of Philately, 2d series, Vol. II, 1889. The growing popularity of essays seems to warrant a revision of his list. In the following list, all essays described by him are included and his numbers are indicated in parenthesis after the new numbers; his designation of colors has been followed and use has been made of his descriptions, especially in case of Types not seen by the writer.
Type 1. (Tiffany, T. 1.) 1850. Head of Robert Fulton, profile to left, with fur cap; POSTAGE at top and FIVE CENTS at bottom, in colorless capitals on solid labels; ALBANY at left and OFFICE at right in colored capitals on colorless ground; corners filled with scrolls of single colored lines.

Die impression, \(23\frac{1}{2} \times 25\frac{1}{2}\) mm. in color, on

(a) Bond paper, showing an exterior line surrounding stamp and about 2 mm. outside the stamp; vermilion, black, blue, green, brown, purple.

(b) India paper, trimmed and attached to larger India paper; vermilion, black, blue, green, red-brown.

(c) India paper, mounted on card; vermilion, black, blue, brown.

(d) Ivory finished paper; black, blue, vermilion.

Type 2. (Tiffany, T. 2) 1851. The design of the one cent 1851 issue, head of Franklin, etc., but value changed to SIX CENTS. Size, etc., as in the original.

(a) India paper; black. Copy seen was cut close and damaged.

(b) Ordinary white paper; black. Copy seen was cut rather close.

Type 3. 1851. Resembles closely the three-cent 1851 issue, but stamp is nearly square; labels are shorter, rosettes are omitted, locks of hair about ears are differently arranged; the oval is \(14 \times 16\frac{1}{2}\) mm. instead of \(15 \times 17\frac{1}{2}\) mm.
Engraved on steel, die impression 20½ x 22½ mm. in color on
(a) India paper; black.

Type 4. 1851. Same head and oval as in last essay; the straight labels have been removed and in place there are curved labels, left blank for the inscriptions.

Engraved on steel, die impression 20½ x 22½ mm. in color, on same piece of paper as last essay, making a horizontal pair.
(a) India paper; black.

Type 5. (Tiffany, T. 3.) 1857. Bust of Washington in profile to left, on oval background, having lines so interwoven as to give the effect of rays extending in all directions; short curved label of solid color, following shape of oval, at top, with POSTAGE in colorless capitals, similar label at bottom, with THREE CENTS in colorless capitals; U and S in upper corners, 3 and 3 in lower corners, all colorless.

Engraved on steel, die impression 17½ x 24 mm.

Type 6. (Tiffany, T. 4.) 1857. Bust of Washington, same as Type 5, on rectangular background of lines so interwoven as to give the effect of zig-zag lines; U. S. POSTAGE at top and THREE CENT$S at bottom in colorless capitals on straight bands of solid color; a colorless five-pointed star in each corner.

Engraved on steel, die impression 19½ x 24 mm.

(a) India paper; vermilion, rose, brown, black, blue, green.
(b) Bond paper; vermilion, rose, brown, black, blue, green.
(c) India paper, same head, more burst, no frame, makes oval 18 x 33 mm.; vermilion, black.

(e) Ivory finished paper; black, blue, vermilion.

Type 7. (Tiffany, T. 5.) 1857. Bust of Washington, profile to left, similar to Type 6, but features a little fuller, robe shorter; instead of an oval, the frame is made up of several wavy bands, of same general shape, formed of diagonal lines crossed; the outer frame consists of a double colored line; the “wave” projects three times at top, bottom and each side; U. S. POSTAGE above and THREE CENT$S below in colorless capitals; the upper label is solid, bent; the lower label is also bent, but formed of parallel colored lines crossed by diagonal colored lines.

In 1861, Toppan, Carpenter & Co., prepared a set of essays similar to the designs of the 1851 and 1857 issue, but with numerals in the four corners. Mr. Tiffany discovered some specimens of this set, after completing his
list and he assigns no numbers. See American Journal of Philately, 1889, page 277.

Original specimens are rare and many of those listed are probably reprints of much later printing; it is said that fifteen sets of the reprints were found among the effects of the late N. F. Seebeck.

It is difficult to name the colors satisfactorily. The set includes:

CONSTRUCTION

The characteristic features of the Marquette Binder construction are the divided back, curved prongs and thumb-catch. The sheets are held firmly in place by 4 arched prongs which engage four corresponding holes in the sheet. By lightly pressing a thumb-catch the divided back is opened, thus admitting of the instant inserting or removal of a single sheet from any part of the binder without disturbing any of the other sheets. When the album is closed the catch locks automatically, holding the sheets securely and in good alignment.

The mechanism of the Marquette Binder is so simple and easily operated that sheets may be added or taken out accurately and with more rapidity than is possible with any other loose-leaf Album.

There are no exposed metal parts in the Marquette Binder and there are no springs to wear loose and break. The binder is, of necessity, strong and durable, yet light and very easy to handle. There is nothing to get out of order, it is dependable and that is why the Marquette Album is so popular.

The prongs are made in a perfect circle, so that closing they fit accurately and do not tear the sheets. The binder is very easy to operate, whether it contains 5 or 500 sheets.

Every part of the Marquette Album is carefully made and accurately assembled. It is neat and takes up very little space, and is, withal, a thoroughly practical every-day binder.
