sizes of the tower.**

# The Eiffel Tower

The Eiffel Tower is 1,083 feet tall which is about the same height as an 81 story building.

It was designed by the Gustave Eiffel company. And it took a two year period to build from 1887 to 1889.

When it was built it was the tallest human built structure and it held this record for 41 years.

It is a global cultural icon and is one of the most recognizable structures in the world.

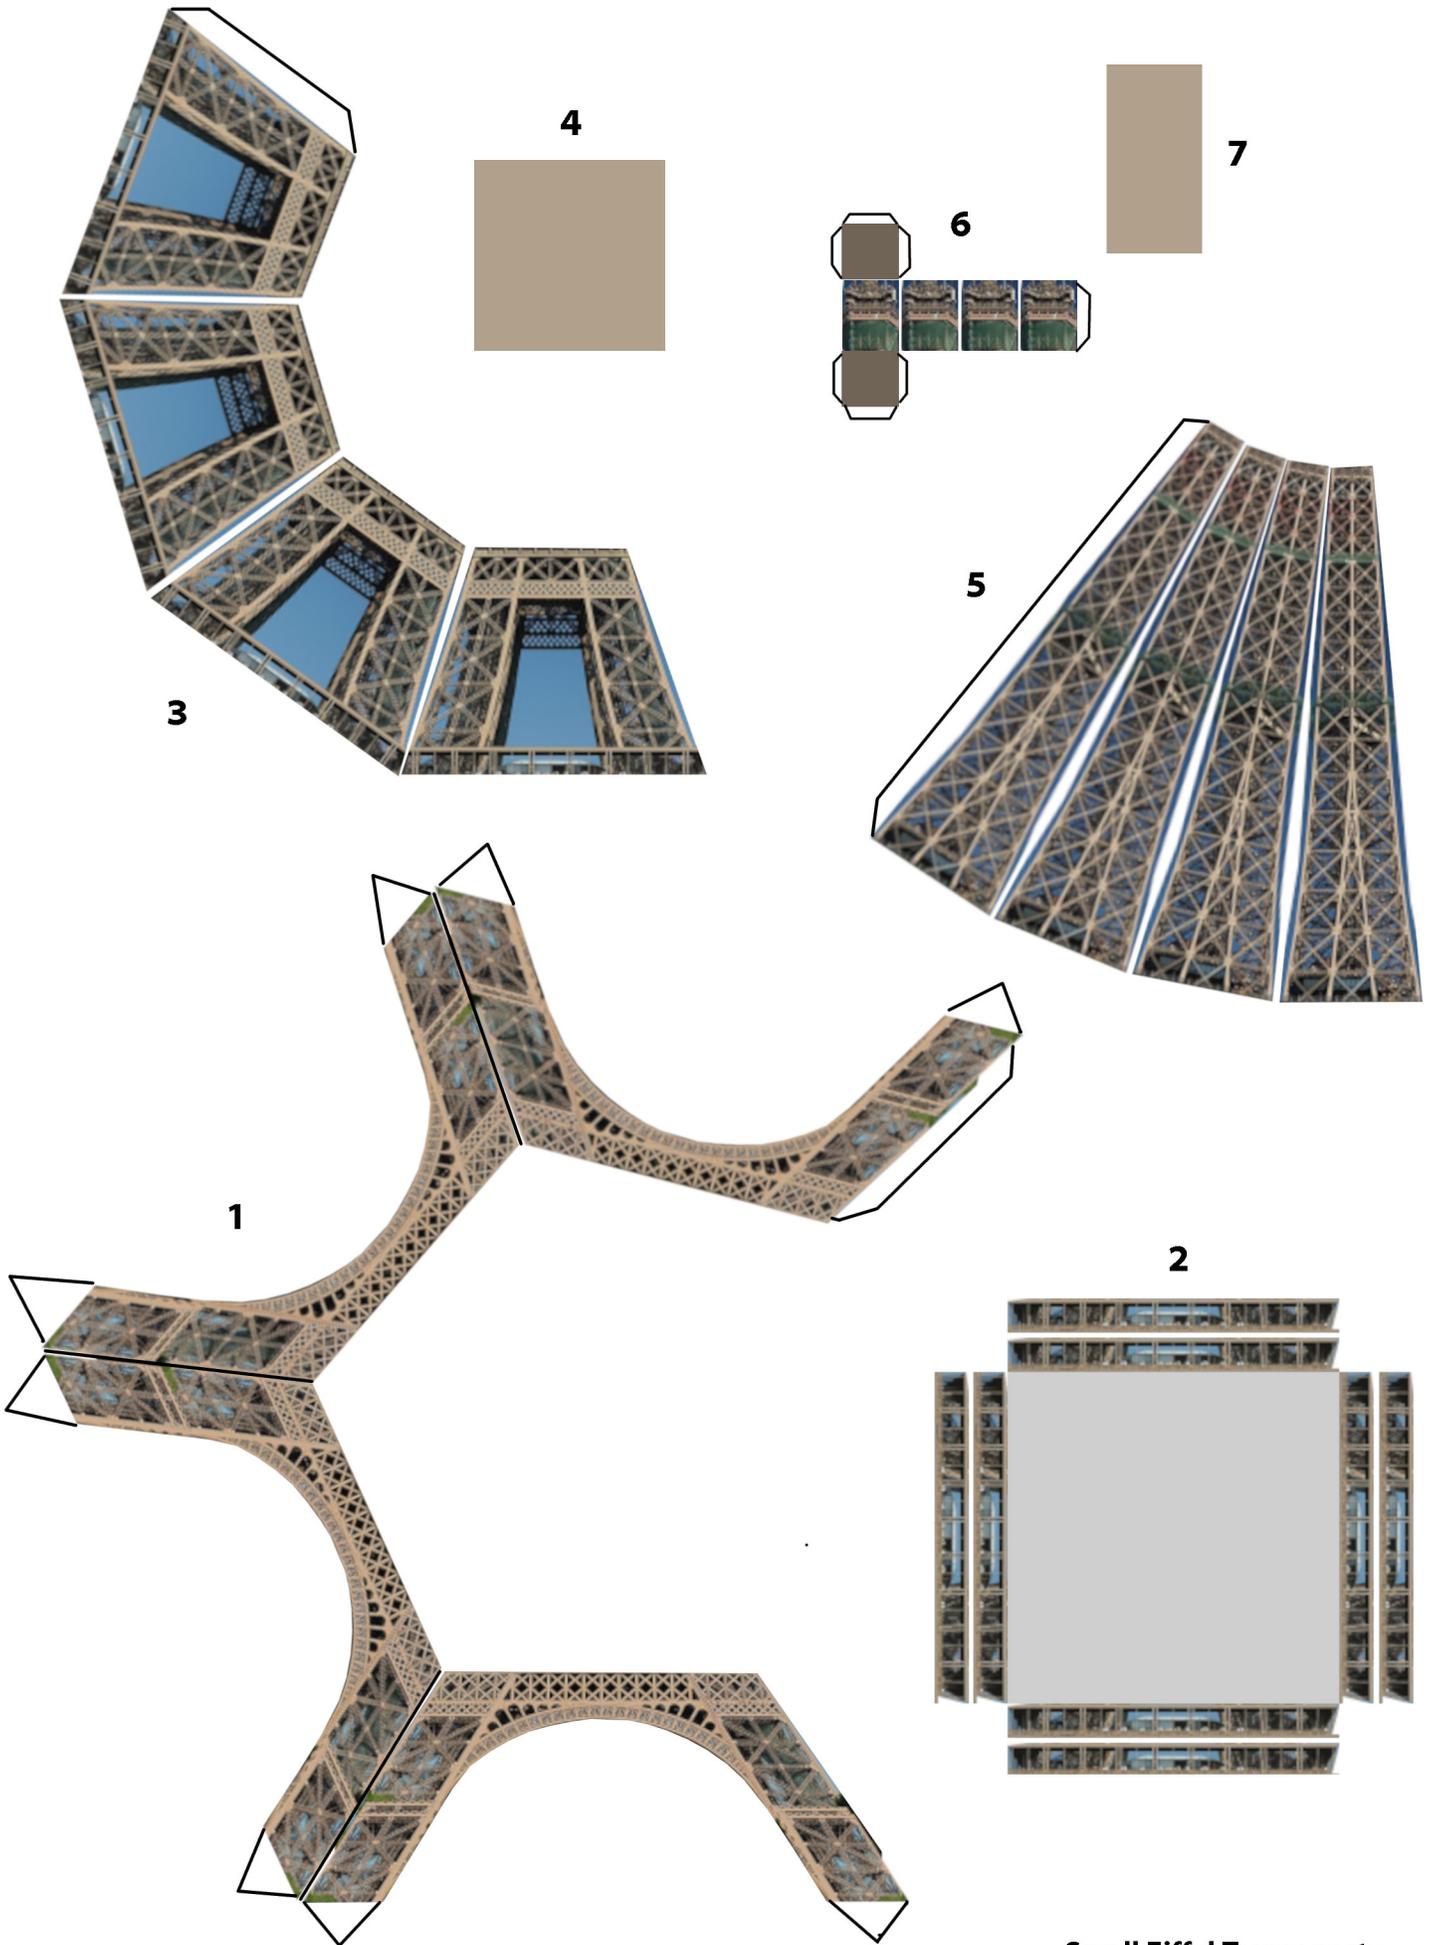

It's base is square and measures 410 feet on each side.

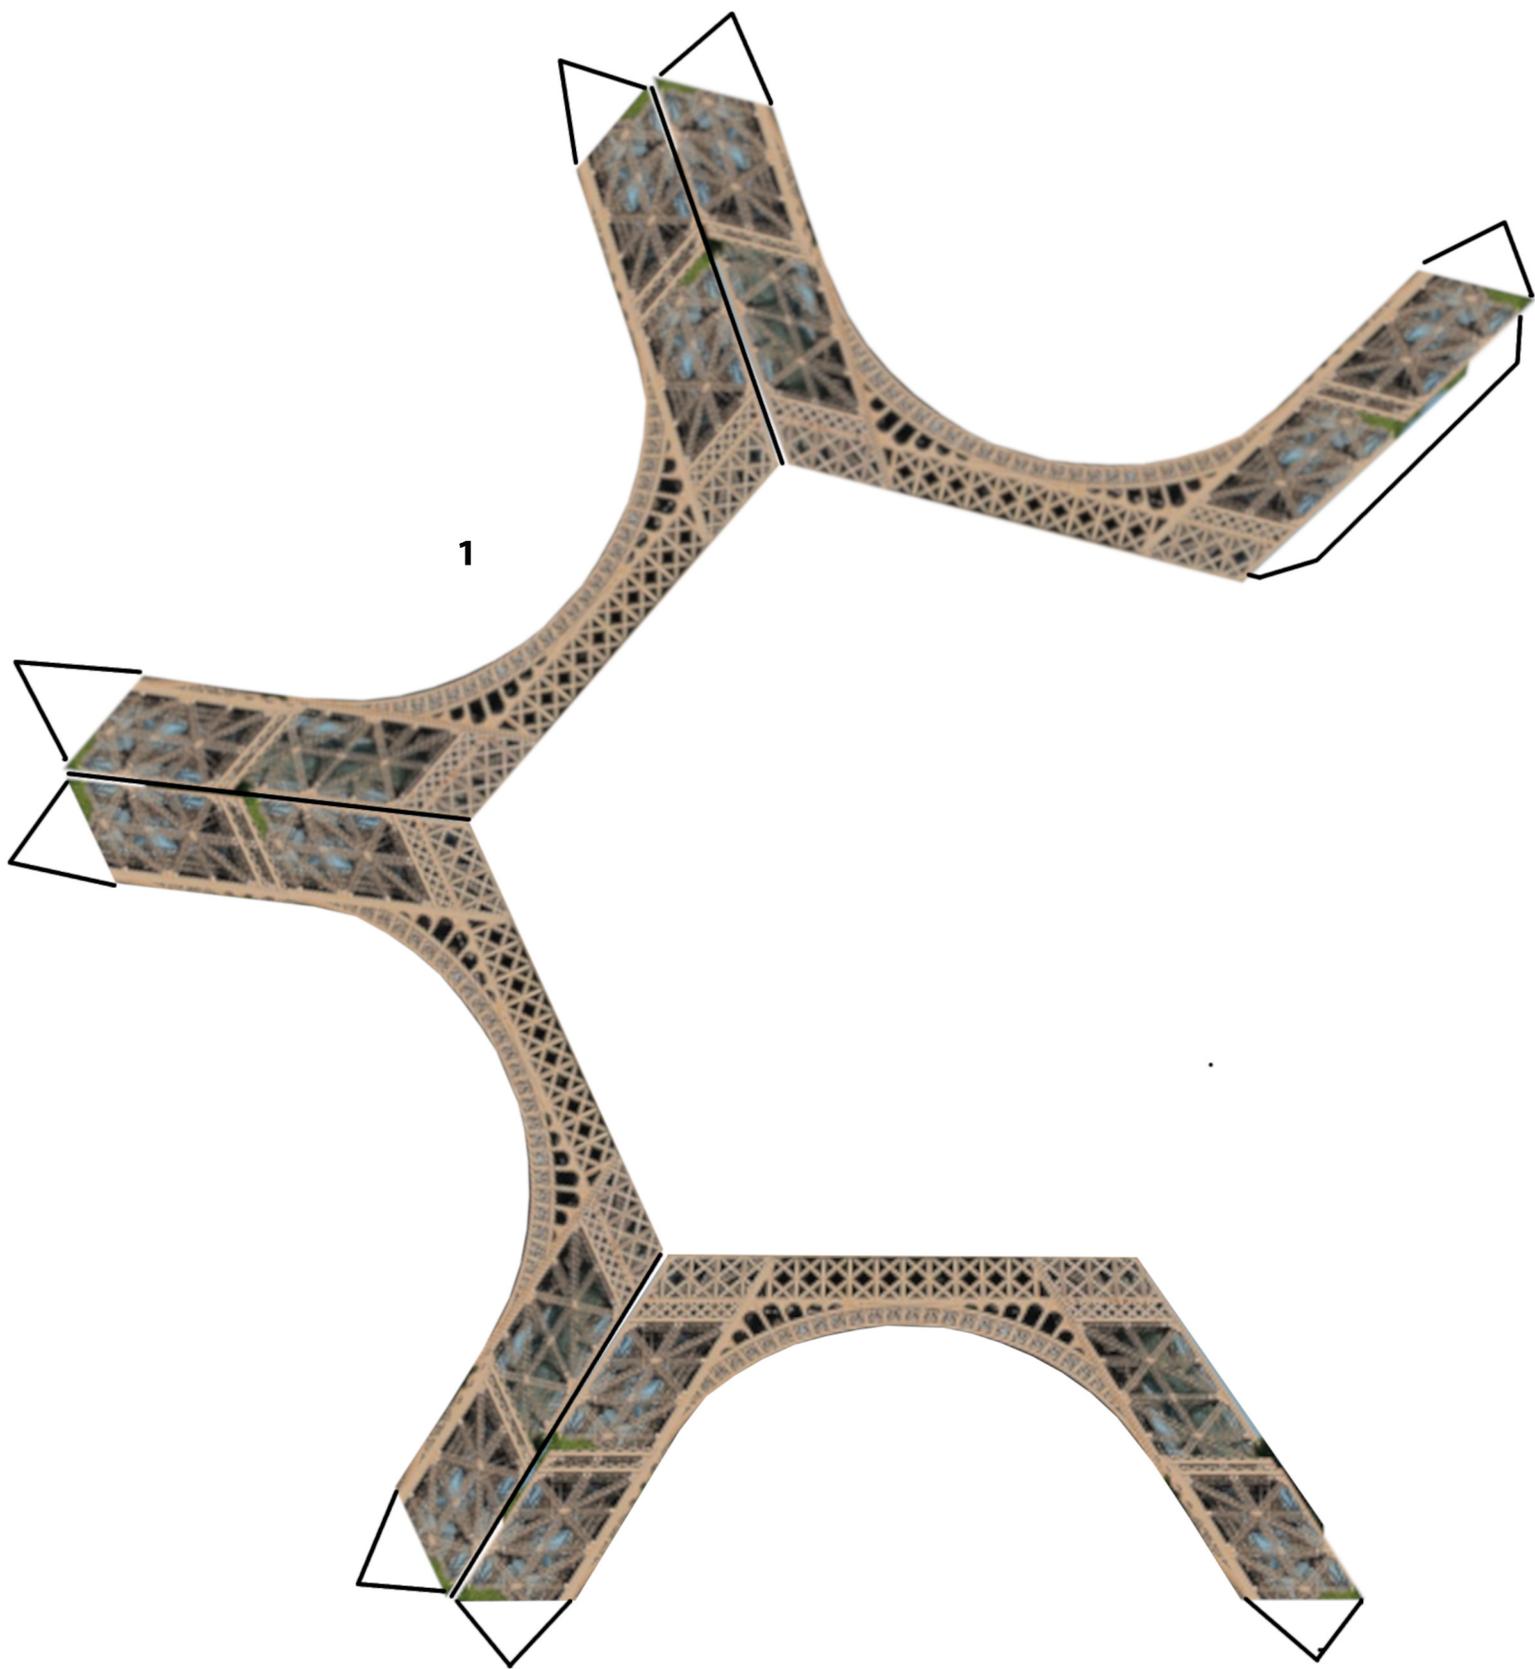

It's construction is called a "lattice tower or truss tower and it is a freestanding vertical framework tower.

The tower has three levels for visitors, with restaurants on the first and second levels.

The top level's upper platform is 906 ft above the ground.
